Energy consumption of individual machinery and equipment can be measured and evaluated directly. The variations between actual and estimated material issued and time recorded can be obtained in the Production Batch History business object. You can start or join in a discussion. Remarks to the flow within the module Inspection orders can be generated, to control the quality of an item or semi-finished goods to be produced, and the raw materials. HYDRA provides appropriate input dialogs for each task as they can be configured individually. Designers take into account logistics information The most important logistical information in BaaN is also available in SmartTeam eg cost. Data transfer can happen bidirectional. For discrete industries, the Shop Floor Control SFC module is used to handle and control production; for process industries, the

PMG module is used, making these two modules counterparts of each .
